

19th Annual

ELECTRIC POWER

CONFERENCE + EXHIBITION
Presented by POWER magazine

GROUP PLAN INTRO

EXHIBITION: APRIL 10–12, 2017 ⚡ CONFERENCE: APRIL 10–13, 2017

McCormick Center West, Hall F1 ⚡ Chicago, IL

We get it. We know that each power plant is different. Each plant has variables that simply aren't replicated at any other facility. Each team has a unique challenge that must be overcome in order for plant performance to increase. We know that everyone on your team is at a different point in his/her career journey, with different skill sets and development needs.

ELECTRIC POWER was built with all this in mind, by a committee of your industry peers in a format that allows for multiple interaction types. Every attendee can expect one-on-one time with experts that can address specific questions, small group conversations with peers to allow for problem-solving dialogue and fun bonding, and large group settings to hear from industry rock-stars on where power is headed.

ELECTRIC POWER is certainly not the biggest event in power—we're far from it—but when it comes to understanding the developmental needs of the industry, we won't be beat. I love a networking party as much as the next gal, but we're much more passionate about providing tools and knowledge that'll improve your team, your plant, and your industry.

We take personal pride in these stats from attendees that were surveyed after last year's event:

- ▶ 98% found that the ELECTRIC POWER Conference content and topics were **relevant to the issues they're currently facing.**
- ▶ 96% stated that **their power plant will become safer** as a result of attending the ELECTRIC POWER Conference.
- ▶ 92% stated that they are **better at their jobs** as a result of attending the ELECTRIC POWER Conference.

We're proud that companies who care about their employees' safety and career development choose ELECTRIC POWER. Let's talk soon so we can create a group attendance package that best fits your team's needs

Thank you,

Jill Dean
